Q: Is my data secure?
A: Located in a secure environment with stringent access protocols, Veber include an HA Firewall config with only ports 80 & 443 open as standard. This can be adapted to suit individual customer/application requirements. Veber are well placed to offer guidance on additional security measures and are ISO27001 certified.

Q: Will my application work?
A: Veber can work with you and your developers to configure the environment as you wish in order to ensure your application works.

Q: Can I use Office 365?
A: Yes, and Veber can assist you with the integration.

Q: How does it scale?
A: Veber will monitor the platform, checking for bottlenecks and will advise of you of the most cost effective methods for scaling the platform depending on workload requirements.

Q: Will this work with on-premise infrastructure?
A: Veber can provide connectivity, VPN links and WAN services to ensure that it does. Veber can also work with you to establish a migration path for legacy systems.

Q: What about Disaster Recovery?
A: Veber have included a managed back-up solution that enables you to restore from file level to your chosen location. A comprehensive DRaaS add on is available with flexible pricing options depending on your business needs.

Available Add-ons

DRaaS – Fixed Fee or pay per hour options to recover critical systems within 1 hour

DaaS – RDP and Citrix options to enable remote working and improve on-site efficiency

Office 365 – Reducing licensing costs and management time

Load balancing – Spreading workloads and ensuring availability for critical services

Server Monitoring – To monitor performance and system availability

*Final price may vary due to currency changes and final configuration
